**Cortland, NY and St. Louis, MO January 22, 2007** - WetStone Technologies, Inc. introduces a new on-demand enterprise malware investigation capability at the DoD Cyber Crime trade show in St. Louis, MO. This new capability provides cyber crime investigators with a new capability in the fight against the increased proliferation of malicious software within enterprise computing environments. The Gargoyle Enterprise Module (GEM) allows customers to execute malware discovery across their enterprise to root out malicious code infiltration and use.

The GEM is simple to use, investigators can quickly target systems for investigation, simultaneously launch the discovery agent and perform remote malware discovery. The resulting collection is then analyzed by Gargoyle Investigator™. Gargoyle Investigator™ now includes enhanced reporting features that provide investigators with detailed enterprise discovery reports.

The GEM can be added to existing Gargoyle Investigator™ installations, moving investigators from postmortem to live malware discovery.

"Our customers have been requesting the ability to perform on demand malware scans in order to apply Gargoyle Investigator™ capabilities throughout their enterprise". The GEM add-on module reduces investigation time, expands investigator reach and delivers new state-of-the-art enterprise malware reporting" stated Chet Hosmer, Chief Scientist of WetStone Technologies.

*About WetStone Technologies, Inc.* - WetStone Technologies, Inc. was established in 1997 to advance digital investigation technologies and training. WetStone is a market leader in steganography investigation, cyber-weapon search and seizure and live digital investigation. Today we focus our solutions and expertise on the challenges of eCrime Investigation, eForensics and eCompliance. WetStone is a subsidiary of Allen Corporation of America ([www.allencorporation.com](http://www.allencorporation.com)).
