

Zombies and Botnets:

Setup-Investigate-Shutdown

Advanced
Course!

(One-Day Advanced Class)

Zombies and Botnets:

WetStone has created this one-day advanced module to their Hacking Bootcamp focusing exclusively on Zombies and Botnets. Students will have unique access to our “hands-on” interactive learning environment. Students will work together to establish a complex Botnet environment and practice investigative methods/techniques to collect criminal information. Each student will learn how to shutdown and isolate Botnet operators and individual Zombies in order to limit or preempt the damage they can cause.

Sinister Cyber weapons

One of the most sinister cyber weapons to arrive on the scene in recent years are Zombies and their associated Botnets.

Today's cyber investigators must possess in depth working knowledge of their internals. To accomplish this you must know how to setup, investigate, and shutdown these weapons.

Botnets are continuing to be a global issue. These types of malicious software are penetrating our personal, corporate and government systems. Statistics are showing that up to one quarter of all computers that are connected to the internet have become a part of a Botnet.

WetStone Technologies, Inc.

WetStone Technologies, the industry leader of digital investigation training and software offers a comprehensive suite of award winning tools and training to thousands of customers worldwide.
