

# SearchLight™

The investigative analysis of network pcap (packet capture) files is a tedious and error prone process. Additional challenges such as the analysis of large pcaps, multiple pcaps and the lack of a highly tuned search and filtering engine continues to impair investigative effectiveness and efficiencies.

## SEARCHLIGHT KEY FEATURES:

- Unlimited pcap file size support and multiple pcap file merging.
- Quick easy filtering and sorting of large pcap files.
- High performance filtering within a case or single pcap file.
- Discrete timeline and protocol filtering.
- Flexible filters that pinpoint security breaches, attack vectors, vulnerabilities and policy violations.
- Rapid identification of network vulnerabilities such as suspicious ports and protocols, rogue access points and unauthorized devices.
- Result generation in XML, PCAP, CSV and JSON formats.
