StegoHunt™ MP

Leveraging a full suite of technologies, investigators, incident responders, breach and data leak prevention teams, and auditors are able to quickly identify if steganography is present in active cases or in a work environment.

Suite includes:

StegoHunt™ MP , StegoAnalyst™ , StegoBreak™

STEGOHUNT KEY FEATURES:

- Quickly identify if data hiding activities are present in an investigations by searching for applications used for data embedding.
- Identify suspect carrier files by detecting program artifacts, signatures, and structural and statistical anomalies.
- Utilize multiple operational discovery modes, including directory, drive, archives, and drive images.
- Report and capture evidence for management or court presentations.

STEGOANALYST KEY FEATURES:

- Provide deep analysis of detected images and audio files.
- Utilize the file viewing panel to display individual file attributes, including image details, DCT coefficients, and color pairs. This allows for a comprehensive analysis of identified carriers.
- Select from various filter options for further analysis, such as Least Significant Bit (LSB's) of specific colors.

STEGOBREAK KEY FEATURES:

- Crack and extract payloads from many carrier files using a simple point and click interface.
- Leverage the popular password dictionaries included to execute a dictionary attack.
- Easily import other dictionaries or create your own to expand your dictionary attacks.
