

StegoHunt™ MP

StegoHunt MP is the latest generation of WetStone's industry-leading steganography program detection tool and steganalysis suite. Leveraging a full array of technologies, investigators, incident responders, breach and data leak prevention teams, and auditors are able to quickly identify if steganography is present in active cases or in a work environment. StegoHunt MP detects the presence of steganography and data hiding programs as well as files in which a data payload may have been embedded.

Suite includes:

StegoHunt™ MP, StegoAnalyst™, StegoBreak™

STEGOHUNT KEY FEATURES:

- Quickly identify if data hiding activity is present in an investigation by scanning files, captured memory images and, for live systems, active processes. Search for evidence of steganography programs using WetStone YARA rules and hash sets provided in the monthly dataset releases.
- Identify suspect carrier files by detecting program artifacts, signatures, and structural and statistical anomalies.
- Utilize multiple operational discovery modes for carrier file detection, including directory, drive, archives, and drive images.
- Report and capture evidence for management or court presentations.

STEGOANALYST KEY FEATURES:

- Provide deep analysis of detected images and audio files.
- Utilize the file viewing panel to display individual file attributes, including image details, DCT coefficients, and color pairs. This allows for a comprehensive analysis of identified carriers.
- Select from various filter options for further analysis, such as Least Significant Bit (LSB's) of specific colors.

STEGOBREAK KEY FEATURES:

- Crack and extract payloads from many carrier files using a simple point and click interface.
- Leverage the popular password dictionaries included to execute a dictionary attack.
- Easily import other dictionaries or create your own to expand your dictionary attacks.

LICENSING:

Perpetual or subscription license for:

- **ESD** — Electronic software download for us on a single system. Not transferable. Basic license is 2 cores. Additional core licensing available.
- **FLASH** — 16GB USB 3.0 device for use in field investigations, and on multiple systems. Limited to 2 cores.

What is included*:

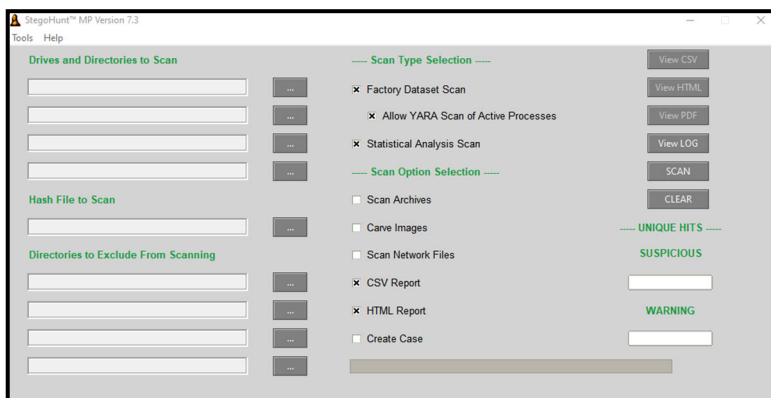

- Customer support portal account
- Access to monthly dataset updates
- Web and email support
- Software updates, as they become available

* For one year following purchase of a perpetual license or the term of a subscription license.
Additional years of maintenance may be purchased.

SYSTEM REQUIREMENTS:

In order to properly support StegoHunt, the computer system must meet or exceed the following minimum requirements:

- Microsoft Windows® 7, 8, 8.1, 10
- Microsoft Windows® Server 2008 R2, 2012, 2016, 2019
- 1 GB RAM
- 1 GHz processor or better

StegoHuntMP Scan Report
